

Prices are already too high causing debts, poverty and homelessness.

It is strongly recommended that the ICRC drastically reduce electricity prices rather than increase it.

The Retailers can remove their CEO's rather than make us pay for their multi billion dollar life style.

Further, it is strongly recommended that the GST and all other taxes be removed, that online card use charges be abolished as well.

Paying online is suppose to decrease costs, not increase them with other charges added on for online payments.

Free assistance with solar energy, maintenance and installation of free batteries would be strongly recommended.

Batteries used for solar energy would need to be tested for safety so that they don't explode and blow up half of the resident's property off as the Lithium batteries do.

It is strongly recommended for ICRC to stop ACTEW from using very expensive helicopters with cameras attached to the bottom to check their power lines for obstructions and to replace them with cheaper alternatives such as Drones that will also drastically reduce electricity prices.

Sincerely
