

ACT Electricity Feed-in Scheme Activity Summary: 1 March 2009 to 31 December 2012

March 2013

The Electricity Feed-in Scheme for feed-in from renewable energy generators to the electricity network is established under the *Electricity Feed-in (Renewable Energy Premium) Act 2008*. The Scheme commenced on 1 March 2009.

The Electricity Feed-in Code is an industry code determined by the Commission under Part 4 of the *Utilities Act 2000*. The Code sets out practices and standards for the operation of the Scheme. Under the Code, licensed electricity suppliers and ActewAGL Distribution, the ACT's only licensed electricity distributor, are required to report quarterly to the Commission on a number of key indicators.

Electricity Feed-in Code – reporting obligations

Schedule 1 of the Code sets out the reporting obligations of the electricity distributor (ActewAGL Distribution) and of licensed electricity suppliers to the Commission. These are:

Relevant utility service provider	Obligation	Timeframe for report
Electricity distributor	Number of connection applications received by suburb	Quarterly
	Number of new connections by suburb	Quarterly
	Total connections by suburb	Quarterly
	Total installed capacity by suburb	Quarterly
	Total metered output by suburb	Quarterly
Electricity supplier	Number of customers receiving feed-in tariff	Quarterly
	Total premium tariff paid out	Quarterly

Distributor's return

A summary of ActewAGL Distribution's reports for the period 1 March 2009 to 30 December 2012 is set out in Table 1. Key results from that table are:

- During the December 2012 quarter, 399 new connections of renewable generators were made to the distribution network, compared with 677 made during the previous quarter.
- In total, 12,109 renewable generators were connected to the distribution network at 31 December, compared with 11,710 at the end of the previous quarter.
- During the December 2012 quarter, 438 new applications for connection of renewable generators to the distribution network were received, compared with 315 during the previous quarter.
- Total installed capacity of renewable generators at 31 December 2012 was 30,149 kilowatts, compared with 28,628 kilowatts at the end of the September 2012 quarter.
- Metered output of renewable generators for the December 2012 quarter was 11,254,200 kWh compared with 6,804,176 kWh in the September 2012 quarter.
- Total metered output of renewable generators from 1 March 2009 to 30 December 2012 was 55,593,447 kWh.

There are now 56 suburbs with 100 or more sites connected, compared with 53 at the end of the September 2012 quarter.

Suppliers' returns

A summary of reports provided by electricity suppliers for the period 1 March 2009 to 31 December 2012 is set out in Table 2. The information in that table shows that at 31 December 2012, there were 9,996 customers receiving payments; up by 68 on the 30 September 2012 level (refer also Figure 1).

Premiums paid during the quarter totalled \$4,567,079 with total premiums paid since the commencement of the Scheme totalling \$24,848,213 (refer also Figure 2). The average revenue per customer receiving payment during the December 2012 quarter was \$457, while average total revenue per customer received since commencement of the Scheme was \$2,486.

During the December 2012 quarter, five suppliers had customers receiving premium tariff payments, which is equivalent to the previous quarter.
